

# U.S. SENATOR BOB CASEY

RANKING MEMBER *Special Committee on Aging*

## The American Health Care Act Will Harm Older Americans in New York

The American Health Care Act (AHCA) will charge older Americans more for their health insurance, cut funding for Medicare, and end Medicaid as we know it. It will result in higher premiums and less security for the 595,000 people age 50 to 64 purchasing coverage in the nongroup or individual market<sup>1</sup> and the 16 percent of people in New York age 65 and older.<sup>2</sup>

**The AHCA Will Charge Older Americans More for Health Coverage.** The American Health Care Act will allow insurance companies to charge older Americans five times more than younger adults for individual market coverage. This “age tax” by itself would raise premiums in New York by \$2,661 annually for a 60-year old.<sup>3</sup>

On top of that, the bill slashes the financial assistance available to older Americans to help with the purchase of insurance coverage. Approximately 126,000 individuals between age of 50 and 64 living in New York currently receive tax credits to help with the purchase of insurance. This is 41 percent of all individuals age 50 to 64 who purchased coverage in the Marketplace in New York.<sup>4</sup>

Under the Republican proposal, the tax credit of \$4,000 to purchase private health insurance would grow slower than medical inflation, reducing the value of the credit relative to the cost of coverage in New York.<sup>5</sup> Older Americans get hit twice: higher premiums and less help paying them.

By 2026, the average premium in the nongroup or individual market for someone age 64 will be 20 to 25 percent higher than it would be under current law.<sup>6</sup>

**The AHCA Could Lead to Medicare Benefit Cuts or Vouchers.** In New York, 3,343,349 individuals receive health coverage through Medicare.<sup>7</sup> The Republican bill cuts over \$100 billion in funding for Medicare, which will make Medicare insolvent up to 3 years sooner than expected.<sup>8</sup> This creates an opportunity for Republicans to come back with policies to increase costs or reduce benefits for seniors.

**The AHCA Will End Medicaid as We Know It.** The American Health Care Act decreases Medicaid spending by \$880 billion by ending the Medicaid expansion and capping most Medicaid spending. It also makes it harder for older Americans to qualify for Medicaid through a number of rule changes. By 2026, Medicaid spending would be about 25 percent less than what is currently projected.<sup>9</sup>

Approximately 712,000 people age 50 to 64<sup>10</sup> and 687,000 seniors in New York benefit from Medicaid.<sup>11</sup> It provides basic health coverage and enables individuals to get the care they need to live at home, including help with activities of daily living, like getting dressed and bathing. It also provides nursing home care for those who need it and helps many over age 65 cover the cost of Medicare premiums.

**The AHCA is a Bad Deal for Older Americans.** Due to its individual market and Medicaid policies, the AHCA will reverse the near 50 percent reduction in the number of uninsured individuals age 50 to 64 achieved between December 2013 and March 2015.<sup>12</sup> It also dismantles Medicaid and sets the stage for cuts to Medicare benefits and increases in Medicare premiums.

- ❖ **AHCA allows insurance companies to levy an age tax on older Americans as it cuts the amount of tax credits available to help purchase coverage.**
- ❖ **AHCA reduces Medicare funding, leaving the door open for future benefit cuts or vouchers.**
- ❖ **In addition to ending the Medicaid expansion, AHCA ends Medicaid as we know it, reducing health security for vulnerable older Americans.**
- ❖ **AHCA gives special interests like insurance and drug companies and wealthy people as much as a \$600 billion giveaway.<sup>13</sup>**
